

Beatty, Nevada

US Ecology

N e v a d a

US Ecology Nevada provides a full range of hazardous waste treatment services along with disposal at a premier desert landfill site. This fully permitted RCRA, TSCA and CERCLA facility is the ideal choice to minimize environmental liability.

Our facility is 100 miles northwest of Las Vegas in the Amargosa Desert near Beatty. The arid climate and deep, stable geology are uniquely suited for permanent waste isolation. Secure disposal is further assured by a multi-layer disposal unit engineering design. The facility is located on 80 acres leased from the State of Nevada and surrounded by federal land.

- 1** container management a specialty
- 2** thermal desorption a cost-effective alternative to incineration
- 3** Full PCB processing capabilities

Treatment Options

US Ecology Nevada offers multiple processes to meet Land Disposal Restriction requirements, including:

- Stabilization of metal bearing wastes.
- Encapsulation of debris.
- Solidification of liquids and sludges.
- Thermal desorption of wastes containing organic compounds.
- Chemical oxidation.
- Neutralization of corrosive liquids and sludges.

PCB Waste Services

US Ecology provides complete PCB treatment and disposal services under our TSCA permit.

Container Program

We make container management easy with exceptional customer service, streamlined waste profile approval and high-throughput scheduling.

- high capacity stabilization facilities support large cleanups
- Large-volume container management expertise
- Small Quantity Generators love our container consolidation program
