Unequaled service. Solutions you can trust.
With more than 60 years of environmental service experience, US Ecology offers expert insight into your needs. We provide reliable, responsive and cost-effective solutions designed to meet your specific waste needs.

At US Ecology, our values are rooted in an unwavering focus on safety and protecting the environment. Our business processes are designed to ensure we meet this goal and continually improve performance.
Nationwide Network of Facilities

Our nationwide network of landfills and treatment facilities manages your hazardous, non-hazardous and radioactive waste needs while offering extensive transportation capabilities, and a wide range of complementary field and industrial services.

US Ecology’s 21 treatment, disposal and recycling facilities use advanced technologies to manage over 600 hazardous waste, PCB and radioactive waste streams.

Leader in NORM/TENORM, Low-Activity Exempt, and LLRW Radioactive Waste Disposal

You’ll find unparalleled low-level and low-activity disposal solutions from the nation’s most experienced radioactive waste disposal company.

We pioneered low-activity radioactive waste disposal at non-licensed disposal facilities. This service line supports the disposal needs of energy production and industrial customers across North America.

- Low-activity radioactive waste disposal
  - Exempt by-product, source and special nuclear material
  - NORM/TENORM/NARM
- Class A/B/C LLRW disposal for Northwest Interstate Compact
Expert Recycling and Chemical Refining Services

Our recycling and refining services include everything from used oil to metals to universal waste, offering our customers “zero waste” alternatives.

- Custom recycling programs designed to meet your needs while helping to protect the environment.
- Waste and materials our facilities recycle include: metals, airport de-icing fluid, NMP and hydrocarbons.
- Our Texas facility offers recycling for waste containing hydrocarbons, featuring the ability to indirectly heat waste at temperatures over 1,000 degrees Fahrenheit.

Transportation Services

We transport waste from the point of generation to final disposition, minimizing cost and liability. We are a licensed waste hauler in nearly every state, transporting volumes from small lab packs to bulk solids and liquids. We provide long-haul and short-haul trucking, full-service rail capabilities, along with barge, ship and intermodal options.

We handle all necessary permits, loading and supervision, packaging, manifesting, and tracking. US Ecology offers import/export expertise and has significant experience with DOT requirements for radioactive material and transporting difficult waste streams.
Customers place their trust in us, and we take that responsibility very seriously.

We’re here to serve you.
