

# Metal Recycling Solutions

US Ecology offers a unique recycling approach recovering metals from liquids and solids. Helping achieve zero-landfill waste goals for our customers, we provide a recycling option for metal-bearing materials rather than disposal.

US Ecology offers a wide variety of recycling solutions in order to meet the specific environmental goals of our customers. Generators across the country depend on us for our innovative treatment technologies, competitive prices, unsurpassed customer service, reliable transportation and lab services, and consistently proven results. We are a technological leader in the treatment of inorganic wastes and metals recycling services. Our metals recycling solutions may offer rebates that can offset processing and transportation costs.

We offer a unique approach to recycling metal-bearing materials rather than disposal. US Ecology Metal Recycling specializes in the reclamation of metal-bearing wastes and byproducts, which would originate primarily in the steel manufacturing and metal finishing industries, including electroplaters and specialty alloy manufacturers. Examples of metals recovered include:

- Silver
- Nickel
- Copper
- Chromium
- Tin
- Cobalt

## Metal Recycling Solutions

US Ecology developed technologies to economically recover and recycle selected metals from waste streams that had been previously disposed of, resulting in a significant benefit to the environment. We work with a network of smelters, refiners and other recycling operations to assure the best ultimate outlet for your material.

US Ecology's network of facilities and service centers provides recycling services, offering our customers "zero waste" alternatives. US Ecology can customize recycling programs to fit your specific needs while meeting regulatory requirements and helping to protect the environment.
