Radioactive Waste Services

Cost-effective, safe and secure disposal of low-level and low-activity waste from the nation’s most experienced radioactive waste company.
With over 60 years of industry experience, US Ecology has pioneered cost-effective, secure and reliable disposal options for radioactive waste. Our Idaho, Michigan, Texas and Nevada facilities are highly engineered, secure, RCRA subtitle C landfills, featuring multiple-liner cell design and post-closure funding. US Ecology’s national high-capacity, high-volume facilities are rail and truck served. We accept a wide variety of low-level and low-activity waste, including:

- NORM/TENORM from energy production, mining and other industrial processes
- Exempt Byproduct, Source and Special Nuclear Materials
- Accelerator-produced material, as well as generally exempt items and devices
- High-activity NORM sealed sources
- Class A, B and C LLRW in the Northwest and Rocky Mountain Compacts

Supported by the industry’s top radiological professionals and customer service experts, we help with all of your radioactive waste needs.

**Locations**

**US Ecology Idaho:**
- RCRA subtitle C facility
- NORM/TENORM waste
- Mixed low-activity radioactive and RCRA/TSCA hazardous wastes
- Generally exempt and accelerator-produced radioactive materials
- Specifically exempted byproduct material, source material and special nuclear material
- Specialize in debris and large-component handling and disposal
- Rail served

**US Ecology Michigan:**
- RCRA subtitle C facility
- NORM/TENORM waste
- Mixed low-activity radioactive and RCRA/TSCA hazardous waste
- Generally exempt and accelerator-produced radioactive materials
- TENORM downblending

**US Ecology Washington:**
- Class A, B and C LLRW for 11 Northwest and Rocky Mountain states
- High-activity radium waste disposal
- Generally exempt and accelerator-produced radioactive materials nationwide
