

# Commitment Statement

## Health and Safety

### Intent

US Ecology is committed to providing a safe work environment and promoting safe practices for all our team members, contractors, and the general public in the communities where we operate. We expect all team members to be committed to Health and Safety and seek to proactively prevent illnesses, injuries, damage, and loss resulting from our operations and actions.

### Commitment

- Provide outstanding safety and health protection to our team members through effective management systems and employee involvement.
- Supply the necessary resources, including professional safety expertise, equipment, and infrastructure to ensure a safe work environment.
- Correct, in a timely manner, all hazards identified through self-inspections, employee reports, accident investigations, or other means.
- Proactively identify potential hazards associated with waste and the waste treatment process, prior to acceptance.
- Provide ample supervision, knowledge, direction, instruction, and training to ensure the safety of our team members.
- Promote employee participation in creating a safe work environment and reporting unsafe work conditions properly and immediately, as well as set the expectation for team members to stop work when safety may be in question.
- Use the results of inspections and accident investigations to improve the safety management system and make this information available to our team members upon request, and
- Pursue, achieve, and maintain safety programs that are consistent with the values of OSHA's Voluntary Protection Program.
