

Hazardous Substance Abatement

US Ecology's team of professionals provides turnkey solutions for containment, removal and secure disposal of asbestos, mold, lead PCB and guano from buildings, structures, surfaces and materials.

US Ecology is an environmental service industry leader, providing unequalled service excellence with the mission to protect human health and the environment. We routinely perform abatement of regulated building materials to support industrial cleaning and maintenance, renovation and demolition projects. Our nationwide network of permitted facilities, including TSCA licensed facilities, gives us the ability to safely and compliantly manage regulated waste streams, including PCBs.

Site-specific safety protocols

Schedules that accommodate your operations

Thorough site assessments

Our protocols include:

- ✓ Signage
- ✓ Plastic sheeting to create critical barriers
- ✓ Installation of negative air units
- ✓ HEPA vacuuming and wet wiping of all surfaces
- ✓ Decontamination units
- ✓ Containerization of all waste

We remove contaminants from:

- ✓ Buildings and structures including bridges
- ✓ Insulation
- ✓ Tiles, flooring, roofs, windows and walls
- ✓ Debris and other materials
- ✓ Air ducts, pipes and tanks

Our technicians are extensively trained and certified to perform abatement, removal and disposal of a variety of hazardous substances and building materials including friable and non-friable asbestos, lead based paint and coatings, regulated gypsum products, mold and products containing PCBs, heavy metals and guano.

We support a variety of customers and industries:

- ✓ Demolition/wrecking companies
- ✓ General contractors
- ✓ Industrial and manufacturing facilities
- ✓ Schools and other public buildings
- ✓ State and federal agencies

We are certified through the State of New York (Industrial Code Rule 56) and the Department of Labor and follow all local, state, federal, and site regulations. To ensure the safety of our staff and our customers, we use specialized abatement equipment including Wet Strip Injection and Negative Pressure Units (NPU) and we require our technicians to use PPE and power assisted respirators.

US Ecology offers customers the convenience of using one provider for assessment, containment, removal including demolition, transportation and proper disposal of all asbestos, PCB, lead and mold contaminated materials and associated wastes.
